ABSTRACT

Municipal Solid Waste Management (MSWM) represents a significant environmental challenge in Indian urban areas, posing risks to public health and the ecosystem due to inadequate management practices. This study aims to conduct a comprehensive review of MSW characteristics, generation rates, collection and transportation methods, as well as disposal and treatment technologies employed across India. The investigation assesses the current status of MSWM in Indian cities, highlighting prevalent challenges. Various treatment technologies utilized for MSW are critically examined, detailing their advantages and limitations. The study concludes with constructive recommendations aimed at fostering collaboration among authorities and researchers to enhance the existing MSWM system.

In today's dynamic business environment, effective management systems play a pivotal role in optimizing operations and ensuring organizational success. Waste Wise Management System (WWMS) emerges as a comprehensive solution tailored to meet the unique needs of businesses operating in the wasteern region. This abstract delves into the key features and benefits of WWMS, highlighting its significance in enhancing operational efficiency and facilitating strategic decision-making.

WWMS encompasses a wide array of modules designed to address various facets of organizational management, including but not limited to, finance, human resources, project management, inventory, and customer relationship management. Through its intuitive interface and customizable features, WWMS offers seamless integration with existing workflows, thereby minimizing disruptions and maximizing productivity.

One of the standout features of WWMS is its robust financial management module, which empowers organizations to gain real-time insights into their financial health. From budgeting and forecasting to expense tracking and reporting, WWMS provides comprehensive tools to streamline financial processes and ensure fiscal responsibility.

Furthermore, WWMS facilitates efficient human resource management by centralizing employee data, automating routine tasks, and optimizing workforce allocation. By leveraging advanced analytics, WWMS enables organizations to identify talent gaps, track performance metrics, and implement targeted training programs, thereby fostering employee growth and retention.

Principal

Swaminarayan Siddhanta Instit
of Technology, Kalmeshwar,
Dist. Nagpur-441501

In addition to internal operations, WWMS offers powerful project management capabilities, allowing teams to collaborate effectively, monitor project progress, and allocate resources efficiently. Through interactive dashboards and customizable reporting tools, WWMS provides stakeholders with actionable insights to drive informed decision-making and mitigate risks. Moreover, WWMS includes robust inventory management features, enabling organizations to optimize stock levels, track inventory movements, and streamline procurement processes. By integrating with suppliers and logistics partners, WWMS facilitates seamless supply chain management, ensuring timely delivery of goods and services.

Finally, WWMS prioritizes customer satisfaction through its comprehensive CRM module, which enables organizations to manage customer interactions, track sales pipelines, and analyze customer feedback. By leveraging AI-driven analytics, WWMS empowers organizations to personalize customer experiences, anticipate market trends, and drive revenue growth.

ABSTRACT

The Real Estate Website project, developed with ASP.NET and SQL Server, is a dynamic web application designed to facilitate real estate transactions and property management. This innovative platform offers an intuitive interface for property buyers, sellers, and agents, enhancing the accessibility and efficiency of real estate services. Key features include user registration and authentication, property listings with comprehensive details, advanced search capabilities, property management tools, a secure messaging system, and an admin panel for oversight. The use of ASP.NET ensures a responsive design, while SQL Server provides a robust database foundation. Security measures, including data encryption and payment integration, prioritize user data protection. The Real Estate Website project contributes to streamlining the real estate industry, offering a user-centric experience in property transactions.

ABSTRACT

Our project is an ambitious undertaking aimed at enhancing the college experience for students while streamlining administrative processes. Building upon the foundation laid in the previous year, we are developing a comprehensive web application consisting of a front-end React-admin-dashboard and a backend powered by either MongoDB or PostgreSQL.

The core feature of our project is the creation of a student dashboard that caters to the needs of both students and administrators. This dashboard will facilitate user authentication, providing students and administrators with secure access to valuable information. Among the crucial data included are departmental and college circulars, which play a pivotal role in students' academic journeys.

Our student dashboard will serve as a central hub for students to access essential information, including exam results, deadlines for internal college assignments, scholarship-related details, exam dates, an online library catalog, and advance notices about extracurricular activities. Through an intuitive and user-friendly interface, students will be able to stay informed about critical dates, requirements, and opportunities, ultimately enhancing their college experience.

In the spirit of the Model-View-Controller (MVC) architectural pattern, our project places a strong emphasis on creating a visually appealing and interactive user interface. We will leverage React to craft rich GUI components that ensure an engaging and responsive user experience.

Our web application is being developed using Java, offering a robust and well-established technology stack to support its various functionalities. It is designed to promote greater student involvement and engagement, enabling the documentation and scrutiny of daily activities that might otherwise go unnoticed or undocumented.

In conclusion, our project aims to bridge the gap between students and college administration by providing a feature-rich student dashboard within an integrated web application framework. This endeavor seeks to empower students with the information they need to succeed academically and engage more actively in college life, all while simplifying administrative processes for the benefit of both students and staff.

ABSTRACT

The "Fund of Employers" project is a comprehensive web-based application designed to bridge the gap between job seekers and potential employers. In today's rapidly evolving job market, it is essential to establish a platform that facilitates efficient communication and collaboration between job seekers and employers. This project aims to provide a user-friendly interface that streamlines the job search process and enhances the recruitment experience for both parties. The proposed application will enable job seekers to create personalized profiles, highlighting their skills, qualifications, and experiences. The system will employ advanced search algorithms to match job seekers with suitable job openings posted by employers. Job seekers can also access resources such as resume building tips, interview preparation guidelines, and career development articles. Employers, on the other hand, will have the capability to post job vacancies, along with detailed descriptions of the roles and required qualifications. The system will facilitate a seamless application review process, allowing employers to shortlist candidates, schedule interviews, and provide feedback efficiently. Additionally, employers can access a database of potential candidates, making the hiring process faster and more targeted.

Keywords:

The "Fund of Employers" project is a comprehensive web-based application designed to bridge the gap between job seekers and potential employers, utilizing a blend of PHP, HTML, CSS, JavaScript, AJAX, jQuery, and Bootstrap technologies. In today's rapidly evolving job market, establishing a platform that facilitates efficient communication and collaboration between job seekers and employers is essential. This project aims to provide a seamless user experience through a dynamic and visually appealing interface. Job seekers will have the capability to create personalized profiles, showcasing their skills, qualifications, and experiences, while also accessing resources such as resume building tips, interview preparation guidelines, and career development articles. The system employs advanced search algorithms powered by AJAX and JavaScript, enabling efficient matching of job seekers with suitable job openings posted by employers. On the employer side, the platform allows for easy posting of job vacancies with detailed descriptions, streamlined application review processes, candidate shortlisting, interview scheduling, and feedback provision. The integration of jQuery and Bootstrap ensures responsiveness and enhanced user interaction, making the hiring process faster, more targeted, and user-friendly for both job seekers and employers.

DECLARATION

This thesis titled, "Centralize Research & Development Parliament System for New Innovation" is my own work carried out under the supervision and guidance of Mrs. Prachi Bhure, for the award of Master Degree of M-Tech (Computer Science & Engineering) in the faculty of Engineering and Technology. This work in the same form or in any other form is not submitted to any other University for the award of any master or degree or diploma.

ABSTRACT

The **"CENTRALIZE RESEARCH & DEVELOPMENT PARLIAMENT SYSTEM NEW INNOVATION"**. The centralized research and development (R&D) parliament system, a novel approach to innovation, emerges as a powerful mechanism to revolutionize the landscape of research, development, and ground breaking discoveries across diverse sectors. The system serves as a nexus for the convergence of knowledge, ambition, and practicality. Here, a diverse array of experts comes together to deliberate, strategize, and make informed decisions about the course of R&D endeavours. Within this parliament, priorities are not only set but refined continuously, ensuring a responsive approach to the ever-evolving world of innovation. The promise of this approach lies in its ability to streamline and optimize the innovation process, leading to faster and more impactful outcomes. By eliminating silos and facilitating the exchange of ideas and knowledge, the centralized R&D parliament system is the catalyst for productive collaboration. This model excels in addressing multifaceted, interdisciplinary challenges that require a collective effort to overcome. Whether it's in the domains of healthcare, energy, or artificial intelligence, the centralized R&D parliament system harnesses the collective ingenuity of experts, ensuring a holistic approach to problem-solving. This abstract provides a glimpse into the potential of the centralized R&D parliament system. It illustrates how this innovative paradigm has the capacity to reshape our approach to research, development, and innovation, paving the way for unprecedented breakthroughs and advancements in a world increasingly defined by technological progress.

This study explores the design and construction of a green building, focusing on sustainable practices and energy efficiency. The research discusses the importance of green buildings in reducing carbon footprint and improving indoor air quality. The study also highlights the role of green buildings in promoting sustainable development and reducing environmental impact. The findings of the study suggest that green buildings can significantly reduce energy consumption and greenhouse gas emissions, leading to a more sustainable and healthier environment.

ABSTRACT

This study explores the design and performance assessment of a passive solar energy building, focusing on harnessing natural sunlight and heat for space heating and cooling. The research discusses architectural elements, orientation, thermal mass, and materials that optimize energy efficiency. Additionally, monitoring and analysis of the building's performance reveal its effectiveness in reducing energy consumption and greenhouse gas emissions. The findings highlight the potential of passive solar design as a sustainable and eco-friendly solution for enhancing the energy efficiency of buildings.

Passive solar energy buildings are designed to utilize natural processes to maintain comfortable indoor temperatures, reducing the need for active heating or cooling systems. These structures harness solar radiation, optimizing features like large south-facing windows, thermal mass, and proper insulation. By maximizing sunlight exposure during winter and minimizing it in summer, passive solar buildings enhance energy efficiency, decrease reliance on external energy sources, and contribute to sustainable living.

Keywords: passive solar energy, sustainability, enhancing energy, sunlight, heating, cooling, carbon emission

ABSTRACT

The construction industry is facing increasing pressure to adopt sustainable practices to mitigate environmental impacts and address resource scarcity. Sustainable construction materials play a pivotal role in achieving these goals by reducing carbon emissions, minimizing waste generation, and promoting circular economy principles. This project provides a comprehensive review of advancements in sustainable construction materials, encompassing various categories such as recycled materials, bio-based materials, and low-carbon alternatives. It explores a wide array of materials such as Human Hair fiber, bamboo, coconut fiber, and more. Each material's sustainable attributes, including recyclability, durability, energy efficiency, and reduced environmental impact, are thoroughly examined. Furthermore, the review investigates the manufacturing processes, life cycle assessment, and environmental performance of these materials. It discusses the challenges and barriers to the widespread adoption of sustainable construction materials, including cost considerations, regulatory hurdles, and technological limitations.

Sustainability is a wide-spread concept in modern construction scenario. Even though the construction industry is suffering by a significant manner in terms of both equipment and materials used, the construction has diversified along with the date sensitive impact on environment. The key is the adoption of a more balanced approach with the environment as its focus to create a better world to live in. This has led to the adoption of a natural fibre like Geogrid for the strength reinforcement in concrete.

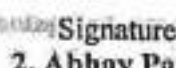

Concrete is the **Department of Civil Engineering** etc, which makes it quite stable as a **ACKNOWLEDGEMENT** ground generated by the construction industry. In addition to this, it is an effective method for the disposal of soil. We would like to express our deep and sincere gratitude to our Project Guide, **Ms. Pranjali Karhade**, Assistant Professor, Department of Civil Engineering, Swaminarayan Siddhanta Institute of Technology, Nagpur for giving us the opportunity to work on this project and providing valuable guidance throughout the project.

We express our sincere gratitude to HOD, Department of Civil Engineering, Swaminarayan Siddhanta Institute of Technology, Nagpur, for his guidance.

Also We express our sincere gratitude to the Principal, Swaminarayan Siddhanta Institute of Technology, Nagpur, who provide all facilities to work and always motivate us. ABSTRACT

Sustainability is a wide accepted concept in modern construction scenario. Even though the construction industry is revolutionizing in a significant manner in terms of both equipment and materials used, the cost of construction has skyrocketed along with the deteriorative impact on environment. This resulted in the adoption of a more balanced approach with the environment as its nerve centre to create a better world to live in. This has led to the adoption of a natural fibre like Coconut for the strength enhancement in concrete.

Coconut fibre is available in abundance at the test site, which makes it quite viable as a reinforcement material in concrete. Further, it acts as a new source of income for the coconut producer who gets the benefits of the new demand generated by the construction industry. In addition to this, it is an effective method for the disposal of coir mattress waste which will reduce the demand for additional waste disposal infrastructure and decrease the load on existing landfills and incinerators. The problem of high rate of water absorption of the fibre could be reduced by coating the fibres with oil. Moreover the fibres being natural in origin is ecologically sustainable and can bring down the global carbon footprint quite effectively.

This study aimed at analysing the variation in strength of coconut fibre (oil coated raw and oil coated processed fibres) reinforced concrete at varying fibre contents and to compare it with that of conventional concrete. The various strength aspects analysed are the flexural, compressive and tensile strength of the coconut fibre reinforced concrete at varying percentages (4%,5%,6% by the weight of cement) of fibre. The influence of shape of fibre on strength is also studied by testing on coconut fibre mesh of predetermined dimensions. The optimal percentage of both the processed fibre strands and raw fibre meshes were found out by trial and error and the optimum percentage of super plasticizer needed for the required workability was also determined.

Keywords: Compressive strength, Tensile strength, Flexural strength, CFRC, Fibre Mesh.

ABSTRACT

This paper explains on POLYMER FIBRE REINFORCED CONCRETE PAVEMENTS, FRC is the undoubtedly to eco-friendly than ordinary concrete, also maintenance cost is less and reduce economy and pollution. The design procedure and paving operation are discussed in details. The Thesis also include the future scope of PFRC. Polymeric fibres are being used now because of their no risk of corrosion and also being cost effective. It is a known fact that petroleum and its byproducts are dooming day by day. Whenever we think of a road construction in India it is taken for granted that it would be a bituminous pavement and there are very rare chances for thinking of an alternative like concrete pavements. In this project showing that how can Fibers help to improve the ductility performance, pre-crack tensile strength, fatigue strength, impact strength and shrinkage cracks. FRC satisfies two of the much demanded requirements of pavement material in economy and reduced pollution. Fibre reinforcement pavement has to reduce the cost of additional maintenance required on concreted pavement. It is ecofriendly and long life sustainability pavement. Polymer fiber reinforced concrete pavement is a recent advancement in the field of reinforced concrete pavement design. Polymer fiber reinforced concrete pavements are more efficient than ordinary cement concrete pavements.

Key words: Pavement Design, Load Bearing Capacity, Fracture Toughness.

ABSTRACT

Keywords: Waste Tyre Rubber, Crumb rubber concrete, light weight concrete.

Modified concrete road is made by confining aggregates, soils and granular materials inside a thin-walled geo cylinder in which we used the waste tyres, aggregates and waste concrete. It is a way of binding crushed stone aggregates together into a load bearing cellular building unit which can support compressive loads and resist lateral soil pressure. This tyre derived cylinder performs functions similar to the cement or water mixture, and the formwork in hydraulic cement concrete. Stones confined in this manner can function in load supporting foundations; earth retention structures i.e. wall sand dams, slope and channel erosion protection. As ditch and channel liners. It is the strength of mechanical cement cylinder that generally defines the overall strength of mechanical concrete and not the crushed stone. 78% of construction waste consists of concrete waste, bricks and tiles. Concrete waste with various fractions was used as coarse aggregate in the research, as well as filler aggregates from the crushed concrete waste tyre were used. Physical mechanical properties of the samples were analysed by comparing the with reference samples where typical aggregates were used.

This review paper provides an overview of the effectiveness of using waste tyres in concrete. With the increasing amount of waste tyres generated globally, their disposal has become a major environmental concern. Incorporating waste tyres in concrete can provide a sustainable solution to this issue, while also improving the performance and properties of concrete. The paper discusses the various methods of incorporating waste tyres in concrete, such as using shredded tyres as aggregates, adding rubber powder as a partial replacement for cement, and using crumb rubber as a filler material. It reviews the mechanical properties, durability, and environmental impact of the resulting concrete, including compressive strength, flexural strength, abrasion resistance, water absorption. The review highlights the potential benefits of using waste tyres in concrete, including reduced energy consumption and greenhouse gas emissions, improved durability, and reduced material costs.

ABSTRACT

The human endeavors in electrical wiring are high and the material utilized for the assembling of the wires is exorbitant. Along these lines it ought to be utilized viably. Hence, this venture is proposed to configuration to limit the human endeavors and to maintain a strategic distance from the wastage of the wires. This framework can precisely quantify wire length and cutting machine can cut wire into number of pieces. The framework works deftly by utilizing legitimate info given by console and showing the information given on LCD. The goals of this venture are to plan and build up a programmed wire slicing machine to accomplish minimal effort cutting. It works quick and lessens the cutting time. This hardware isn't structured utilizing muddled parts. This machine is basic and compact. This machine is planned utilizing point bars, rollers, manage cylinders, shaper and controller unit to control the whole activity of machine. The down to earth goal of the programmed wire slicing machine is to cut required length of wire in required number of pieces.

ABSTRACT

Microgreens are edible young plants that have recently attracted interest because of their color and flavor diversity, phytonutrient abundance, short growth cycle, and minimal space and nutrient requirements. They can be cultivated in a variety of systems from simple home gardens to sophisticated vertical farms with automated irrigation, fertilizer delivery, and lighting controls. Microgreens have also attracted attention from space agencies hoping that their sensory qualities can contribute to the diet of astronauts in microgravity and their cultivation might help maintain crew physical and psychological health on long-duration spaceflight missions. However, many technical challenges and data gaps for growing microgreens, both on and off Earth remain unaddressed. This review summarizes recent studies on multiple aspects of microgreens, including nutritional and socioeconomic benefits, cultivation systems, operative conditions, innovative treatments, autonomous facilities, and potential space applications. A novel approach to grow microgreens and using Mqtt protocol for controlling the parameters remotely. In an indoor growth room without an external (or natural) light source, lighting is incredibly important but not all lamps are created equal. Plants need a specific amount of light/quality depending on their stage of growth and type of crop. Hence, we need automation here. The microgreens automation system maintains required light for your plants with a smart system. Because indoor farming does not depend on outside influences like rain and sunshine, it means that you can often grow all year round. All seasons can be controlled by automation called smart microgreens farming.

ABSTRACT

Now a days we are facing the problem like pollution power cut problem etc., in order to avoid or overcome this problem we have plane to make a device which does not face such problem so we have thought about the device which can be performing its function without causing any problem so we have decided to making the project on crop cutting this project uses the renewable energy sources because of power storage for its operation here using solar energy the aim of our project to develop portable fully automated solar based crop cutter. The design objective is to come up with a mower that is portable, durable, easy to operate and maintain. It also aims to design a self-powered mower of electrical source; a cordless electric lawn mower. The heart of the machine is a battery-powered dc electric motor. It comprises of a system of speed multiplication pulleys which drive the cutting blades and the charging unit comprising of a 12V alternator and a lift mechanism meant to alter the height of cut. The use of collapsible blades and incorporation of an alternator for recharging the battery make the design unique such that no engine is involved. Performance test gave a cutting efficiency of 89.55% with 0.24kN human effort. Thus, the machine is considered highly efficient and is readily adaptable to different cutting conditions.

Keywords : solar energy , battery , high speed dc motor , cutter , agriculture etc.

ABSTRACT

India is an agriculture based country in which, 70% of people depends on the outcome of farming. But if we observe that with increase in population the farm gets distributed among the family and because of this, farmer in India held averagely only two acre farm. Also economically, farmers are very poor due to which they are unable to purchase costly equipments hence they use traditional method of farming. In this project we'll take a look at solar operated pesticides sprayers on wheels. A sprayer of this type is a great way to cover large areas such as lawns quickly and easily. Solar spray are the ultimate cost effective solution at the locations where spraying is required. This study attempts to provide a comprehensive solution to agriculture's future energy requirements. Spraying does not happen all year long. As a result, the same PV (Photo-Voltaic) system used in solar sprayers may be used to power other agricultural operations such as pumping and lighting. Increased pricing and nonavailability of traditional power or fuel at peak times in remote areas are two variables that influence their adoption. As a result, the focus should be on designing and developing self-contained renewable energy sources that can provide consistent electricity and meet the energy needs of farmers who are far away from their farms.

Key words: Renewable energy, photovoltaic, pesticide sprayer, diaphragm pump, portable etc.

Relieving Letter and Experience Certificate

Dear Komal Rahangdale,

We are pleased to provide this Relieving Letter to confirm that Komal Rahangdale has successfully completed 1 month of internship with our Company from **1st Jan 2024 to 9th Feb 2024.**

During his tenure with us, Komal Rahangdale was involved in Python Development projects. We acknowledge his dedication, enthusiasm, and willingness to learn during his time with our organization. He has been an asset to our team, and he will be missed.

We wish him all the best for his future endeavors, and we are confident that he will achieve great success in his career.

Thank you for your contributions to **FabrikonAI systems**, and we hope that the experience gained during your internship will be valuable in your future endeavors.

We wish you all the success in your future endeavors.

Your sincerely,
Human Resource Head

Dear Shruti Dandekar,

This letter is to certify that Shruti Dandekar has been working with Analog Digital Media Pvt. Ltd. as a Web Developer for the past year from 1 May 2022 till 1 May 2024. During their tenure, Shruti Dandekar has made significant contributions to our organization.

As a Web Developer, Shruti Dandekar has successfully led multiple projects from concept to deployment. They have contributed to the development and maintenance of several websites that are still being used by our clients to date. Their technical expertise and problem-solving skills have been remarkable, enabling our company to deliver high-quality products that meet the needs of our clientele.

In addition to their technical abilities, Shruti Dandekar has also been an excellent team player. They have been an effective communicator, clearly conveying project goals, timelines, and milestones to the team. Their positive attitude, enthusiasm, and willingness to help the team have made them a valuable asset to our organization.

Shruti Dandekar's ability to collaborate with team members and quickly adapt to changing requirements helped us achieve several project milestones ahead of schedule. Their contributions have helped our company to maintain a reputation as a reliable service provider.

We thank Shruti Dandekar for their excellent services to our organization over the past year and wish them all the best in their future endeavors.

Sincerely,
Shahrukh N. Sheikh
